Master's Graduate

Recent M.Sc. Computer Applications candidate graduating 2026 with hands-on experience in Terraform IaC, Python automation, and GitHub Actions CI/CD on Microsoft Azure. Built a production-grade automated disaster recovery pipeline using ephemeral infrastructure provisioning, Python orchestration, and incident prevention principles. Familiar with Docker, Kubernetes, Linux, networking fundamentals, and Git. Currently pursuing AZ-104. Eager to contribute to SRE monitoring, incident response, and reliability engineering under experienced mentorship.

EDUCATION

M.Sc. Computer Application

Symbiosis Institute of Computer Studies and Research

06/2024 - 05/2026 Pune

WORK EXPERIENCE

Project Control Service Associate

Accenture

02/2024 - 08/2024 Pune

- _Managed internal resources, demonstrating strong process control and collaborative workflow.
- _Authored and maintained essential project documentation and status trackers, aligning with the need for accurate process records.
- _Gained exposure to project lifecycle phases and corporate communication requirements.

Network Trainee

Movate

07/2022 - 12/2022 Chennai

- _Provided L1 technical support for client network and connectivity issues, utilizing troubleshooting fundamentals.
- _Created and managed support tickets, ensuring accurate documentation and strong follow-up protocols necessary for Incident Management.
- _Developed a solid foundation in networking concepts and troubleshooting.
- _Recognized as the Top Performer in the project for December 2022.

SKILLS

Python | Linux | BASH | Networking | Azure |

AWS | Docker | Kubernetes | Terraform | Git |

Github Actions | CI/CD | RestAPI | Jenkins

PERSONAL PROJECTS

Phoenix Protocol: Automated DR Validation Pipeline

- _Built a fully automated disaster recovery testing pipeline on Microsoft Azure using Python and Terraform, eliminating the need for manual backup verification.
- _Provisioned and destroyed ephemeral Azure SQL infrastructure per test run using Terraform IaC, ensuring zero idle cost and no configuration drift between runs.
- _Wrote a Python orchestration script to authenticate with Azure, copy production databases to isolated drill environments, and verify data integrity automatically.
- _Integrated the pipeline into GitHub Actions with a weekly cron schedule and a guaranteed cleanup step to prevent leftover cloud resources on failure.

Simulation Job Queue API

- _Architected a RESTful API using FastAPI to manage simulation job lifecycles, designed around high-throughput tracking and reliable state management.
- _Enforced strict data validation using Pydantic models, ensuring consistent and reliable processing of all incoming simulation requests.
- _Containerised the full application using Docker and Docker Compose, eliminating environment inconsistencies across development and deployment.
